Tree Plantation

(1st April 2018 to 30th September 2018)

The entire area inside BGR covers with Greenery through massive plantation activities. Through massive plantation work and by giving protection to natural forest growth in side BGR premises, the entire area has become green. The entire plant area where processing plant facilities do not exist has a green cover. This helps in reduction of noise and air pollution level in one hand while on the other hand provides protection to ecological features of the area. The refinery has an excellent quality environment around its complex. Natural greenery can be seen all around the complex and in all seasons of the year.

Tree Census was done by Divisional Forest Office, Chirang. As per census, 84545 numbers of plants which include trees including shrubs, ocular estimated 33000 numbers bamboos in 1150 no. bamboo culms and also trees planted by BGR during 2003 to 2012.

During, 1st April 2018 to 30th September 2018 BGR has planted 14507 nos. of trees

Additional Information
(1st April 2018 to 30th September 2018)

Effluent reused during the period was around **98.64 %** of the total effluent treated which includes plant effluent as well as BGR Township sewer.

Under the Leak Detection and Repair programme (LDAR), BGR is conducting quarterly Fugitive Emission Survey. During the period from **1st April 2018 to 30th September 2018**, **23247** potential leaky points checked and **197** Leaky points detected and rectified. By following LDAR programme in true spirit, the company could not only avoid potential loss of **55.17** MT (approx.) of light Hydrocarbon to the atmosphere through fugitive sources but also able to keep healthy work environment in the plants.

To ensure work area quality and health of equipments, quarterly noise survey was conducted covering all the operating plants, control rooms and ambient surrounding the BGR. During **1st April 2018 to 30th September 2018,** Noise Survey for two quarters of 2018-19 has been completed and no abnormality was reported.

As a measure of Hazardous Waste Management, M/s Ballmer Lawrie & Co. Limited was awarded the contract of mechanized treatment of tank bottom sludge. A new contact has been lined up for processing of accumulated oily sludge, which are stored in the concrete lagoon. Melting pit facility is available for recovering oil from oily sludge.

One old slurry thickener from Petrochemical section was converted to confined space bio-remediation reactor to treat oily sludge with help from IOCL-R&D. The process of bio-remediation started from July 2017 and at present per batch approximately 35 m3 of oily sludge is being processed. From April'18 to Sept'18, 224 MT of oily sludge has been processed in the Bio-reactor.

BIO-REMEDIATION FACILITY OF BGR

Further two more Rain Water Harvesting (Ground Water Recharging) schemes in BGR Township have been implemented during 2016-17.
